(54) Mounting set for a cable set

(57) In order to ensure a high quality during manufacture of a cable set (3), the mounting set (2) for the cable set (3) has a mounting underlay (4) which defines a desired geometry of the cable set (3) and on which cables (6) can be laid to form the cable set (3). An element (12 to 22) associated with the cable set (3) is connected to the mounting underlay (4). The mounting underlay (4) is only used for a special cable set (3) and is used up after manufacturing the cable set (3). The risk of incorrect manufacture of the cable set (3) is thus kept low.
